

NKB BANANA BOOT

Art. No. 44130-4350

For the extreme needs and expectations of wake-stylers, again a special boot was built to fulfil these wishes - the Banana Boot.

Because of the experience of the Frank Boot, a lot of things in the construction of the Banana Boot have been changed and refined. The material at especially stressed points has been reinforced, the inside of the boot shows a triple sew to ensure the material is not delaminating.

A medium soft density liner offers both, flexibility and support. Built in J-bars improve the heel hold significantly. An articulating cuff allows the boot to flex with the rider without boot distortion.

A brand new double X lacing improves wear resistance and tensile strength. This Banana Boot is a boot that helps you to step up your riding to the next level!

- Medium soft density liner for both flexibility and support
- Built in J-bars improve heel hold
- Articulating cuff - boot flexes with rider
- Low friction eyelets
- New double X lacing
